Register Number: RA2111003011729

Mail ID: ag9407@smist.edu.in
Department: CSE
Specialization: CORE
Semester: 3 semester
Section: L2

Subject Title: 18CSC201J Data Structures and Algorithms

Handled By: (Dr. V V Ramalingam)

Assignment – CrossWord Puzzle (Unit 1,2,3, & 4)

(Write about the assignment questions and how u solved differently)

The Crossword puzzles were quite challenging as well as interesting to solve. They were prepared such a way that they could assess how much student understood the concept. Most of the questions concentrated on the theoretical concepts of the syllabus but few of them were practical-based as well. They covered almost all the topics. Some of the questions were direct from the concept and hence easy to score while others were not direct, but we could solve them if we understood the concepts well. Few of the questions were application based such that we needed to apply the concepts which we studied to get to the answer. Totally, by solving the given questions, we understood the concepts which were not too clear already, got to know the applications, applied them practically and made use of the concept properly.

Assignment

(what is the most interesting part in the assignment)

The most interesting part of the assignment was solving the crossword. I always believed in the principle of Learning with Fun. Crossword puzzles test, challenge and push us in ways that are both rewarding and satisfying. All it takes is some dedicated focus on fundamentals of concepts and working the clues. They are a great way to unwind and keep the mind sharp and engaged. Combining studies with interactive games like crossword puzzles help students by making the process of learning more fun and engaging
